Having extensive knowledge in iOS Mobile Application development. I have a passion for technology and a flexible, creative approach to problem solving. Passionate about technology and actively follow trends in architecture software. Ability to take ownership of business requirements, devise & develop solutions that meet customer needs.

INDUSTRIES: IoT, SaaS, Enterprise, Voice and Speech, Art and Culture, Sports and Gaming

TECHNICAL SKILLS

• ObjectiveC	9 years
• Core Data	6 years
• Swift	5 years
• SQlite 3	5 years
• SwiftUI	1 years
• RxSwift	6 months

PROJECT DETAILS

• Crestron Zūm

Project Description: Crestron Zūm is a wireless lighting control platform that’s easy to design, setup, and manage whether for a single standalone space or an entire building. All Zūm devices intelligently “pair and play” with the tap of a keypad or dimmer. The Zūm app makes it easy to name and combine rooms, set scenes, optimize daylighting, set up a time clock for scheduled events, and execute temporary overrides.
Responsibilities: - Working on BLE Integration with iOS application to connect with Crestron Zūm. - Handling various R&D tasks for the new devices connection integrations. - Involved in Estimating timelines, regular coding and Unit Testing. - Involved in Product discussion with cross platforms and cross functional teams. - Involved in active Product development and distribution.
Technologies: iOS
Industry: IoT

• AirMedia

Project Description: With Crestron AirMedia® you can walk into a room and wirelessly present slides, spreadsheets, documents, on-device videos and photos, even web pages and apps – all on the room display from your iPhone® or iPad®. With new full screen device mirroring, presenting directly from your favorite app is more intuitive and with better quality than ever before. The updated interface with optional Crestron Fusion® calendaring and PinPoint™ proximity beacon support allows for the fastest full-screen connection experience available – no more being tied to a laptop or podium. Requires a Crestron AirMedia wireless gateway (AM-101), or Crestron product with AirMedia built-in: Crestron Mercury™, DMPS3-4K-250-C, or DMPS3-4K-350-C. AM-100 users will need to install the AirMedia for AM-100 app.
Responsibilities: - Working on both iOS & Mac applications and building wireless conferening in connecting to Crestron Soundbar. - Working on Apple AirPlay Integration with SplashTop Library for screen mirroring. - Working on Objective C to Swift migration for the existing old Modules, and M1 Chip Mac support. - Handling various R&D tasks for the media driver integrations. - Involved in Estimating timelines, regular coding and Unit Testing. - Involved in Product discussion with cross platforms and cross functional teams. - Involved in active Product development and distribution.
Technologies: iOS, macOS
Industry: IoT

• RemotePC

Project Description: RemotePC - Access and view your computer remotely, from any computer Install the RemotePC app on your Mac and access your computer remotely from anywhere. You can connect to your office or home computers remotely, at after hours or on the fly, and work on documents including emails, and applications.
Responsibilities: Working on WebRTC compilations and Integration with RemotePC suit for screen sharing and real time communication. Working on Objective C to Swift migration for the existing old Modules, and M1 Chip Mac support. Mentoring other peers for best architecture and coding practices, involved in peer code review. Handling various R&D tasks for the products, which put them in leading in the industry. Involved in Estimating time lines, regular coding and Unit Testing. Involved in Product discussion with cross platforms and cross functional teams. Involved in active Product development and distribution.
Technologies: macOS
Industry: SaaS

• HelpDesk

Project Description: RemotePC HelpDesk possibly offers the best performing remote support solution with near-real-time screen replication. With optimisations at various levels, RemotePC HelpDesk easily beats competition for most scenarios.
Responsibilities: Integrating Twilio Chat in HelpDesk for real time conversation including Audio/Video call. Working on Objective C to Swift migration for the existing old Modules, and M1 Chip Mac support. Mentoring other peers for best architecture and coding practices, involved in peer code review. Handling various R&D tasks for the products, which put them in leading in the industry. Involved in Estimating time lines, regular coding and Unit Testing. Involved in Product discussion with cross platforms and cross functional teams. Involved in active Product development and distribution.
Technologies: macOS
Industry: SaaS

• Oracle Primavera Unifier

Project Description: he Oracle Primavera Unifier mobile app is the perfect companion for Unifier users on the go. Project managers and field users can use the Unifier mobile app to view, update, and collaborate on projects. Users can manage tasks, create business process records, and review documents. While offline, field users can continue to work on their downloaded project data and documents. Unifier mobile app requires you to have a valid license for Primavera Unifier 16.2 and above. Oracle recommends that you upgrade your Primavera Unifier installation to the latest version to utilize all the features of the mobile app, as some of the recent features are supported only on the latest version of Primavera Unifier.
Responsibilities: Developed various modules for Unifier iOS App in Objective C & SWIFT, involved in Product Development and Architecture design. Played key role in developing Offline mode, Involved in DB schema design and End to End SQLite DB maintenance for iOS App. Implemented Heap Analytics and PLCrashReportor for better customer experience. Handled group of juniors, mentoring and coaching them to adhere Apple guide lines and Oracle Security guide lines. Reviewing others code and guiding them to make high usability and quality code. Maintained CI/CD process and Worked along with cross-functional teams like IPS translation and PMO teams for regular release. Involved in multiple R&D tasks to bring native OS features to Unifier product which add-ups better user experience. Worked as App Security & App Point of contact also member of SWAT team, handling customer escalations and Interacting with customers by analysing their issues and fixing them on priority. Involved in Estimating time lines, regular coding and Unit Testing. Involved in Product discussion with cross platforms and cross functional teams. Involved in active Product development and distribution.
Technologies: iOS
Industry: Enterprise

• TeamR

Project Description: TeamR provides safe and secure professional collaboration with in the Organisation. It provides easy communication with other peers in the organisation and makes more comfortable in sharing files, media, images and videos. We can perform groups and individual chat and can make conferences with the help of Audio/video communication.
Responsibilities: Worked as individual developer for all iOS Apps with Objective C & Swift. Developed Network helper which used the in all iOS Apps (TeamR, CEMS Portal and Xenvoice) in the Organisation. Successfully implemented real-time communication with Socket.io in TeamR for chat and Integrated WebRTC for Audio/Video calling. Involved in Estimating time lines, regular coding and Unit Testing. Involved in Product discussion with cross platforms and cross functional teams. Involved in active Product development and distribution.
Technologies: iOS
Industry: Enterprise

• Xenvoice

Project Description: Behind the curtains! Behold the best cloud phone service bargains!Xenvoice brings you an array of next-generation business communication features and services through its cloud phone services. Enjoy full HD voice Calls at an affordable price. With Xenvoice Mobile, you can experience the power of voice in the cloud - Anywhere, with any device, and at any time. Now never miss your important business call. Xenvoice Mobile facilitates you to take your calls, meetings, conferences, and more with you wherever you are. You can use Wi-Fi or 3G to enable your valuable interactions!
Responsibilities: Developed Network helper which used the in all iOS Apps (TeamR, CEMS Portal and Xenvoice) in the Organisation. Successfully Integrated PJSIP library (C based), and Implemented HD quality audio calls in Xenvoice. Integrated Google Analytics and Crashlytics for app analytics and reporting Involved in Estimating time lines, regular coding and Unit Testing. Involved in Product discussion with cross platforms and cross functional teams. Involved in active Product development and distribution.
Technologies: iOS
Industry: Voice and Speech
